

Big Dutchman®

"TRACK-N-CARRIER"

Egg Handling System

This ruggedly constructed system is easy to install and simple to operate. Its cast-iron wheel assemblies have hardened and ground needle bearings for smooth and easy movement along a sturdy "I" track of high carbon steel that provides extra strength. The three-position track switch has a simple pull-chain control. Excellent air circulation for the eggs is made possible by the grill design of the carrier that is zinc-plated for high corrosion resistance. Platform heights are adjustable.
