

Big Dutchman®

UniGROW360

Starter Feeder for Turkeys

Start poults quickly and move them out sooner with the Unigrow360 Starter Feeder for Turkeys

The innovative, patented Big Dutchman Unigrow360 Starter Feeder for Turkeys provides:

- quick starts
- the ability to move birds out at an earlier age
- more feed in the pan without waste
- easy access to feed

Unigrow360 pans flood in a full 360° circumference, and feed flows easily without bridging, so all birds can easily access feed.

Every pan can be adjusted from a full-flood position to a height you determine—or anywhere in between—in minutes, saving significant time and labor when compared to hand-adjustments.

One easy-to-use winch simultaneously adjusts all pans in a section of feeder line up to 250' (76m); no individual pan settings are necessary.

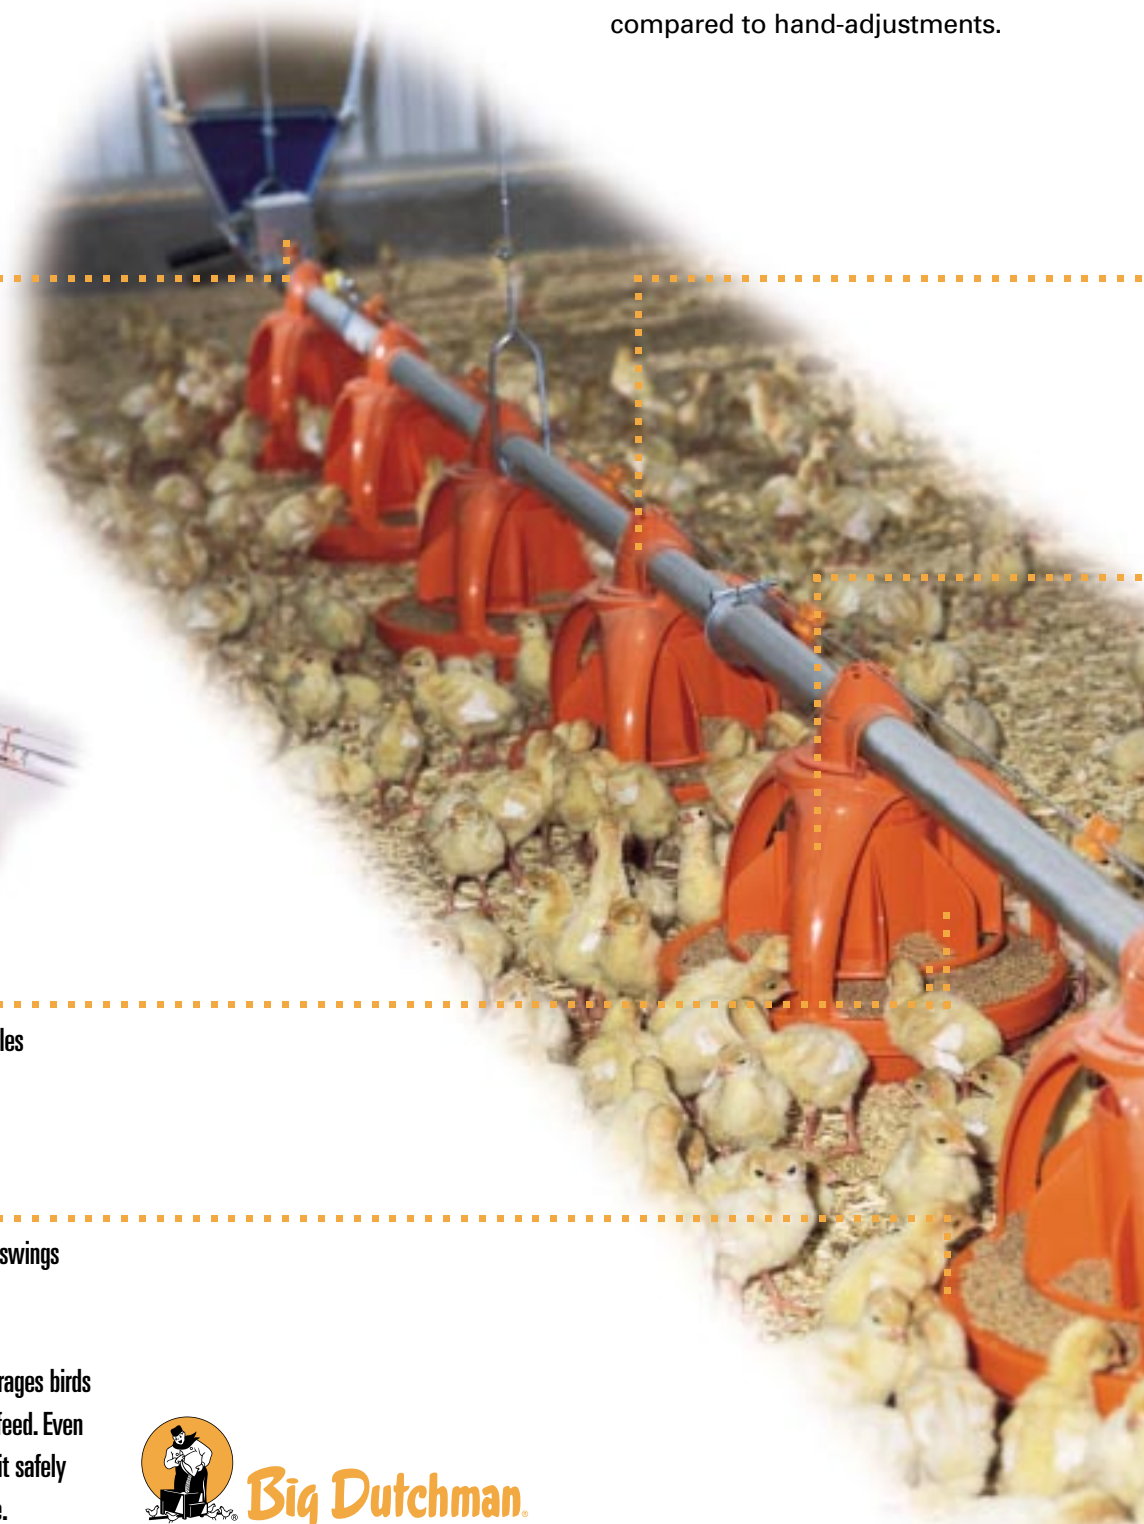

The integral scratch ring and feed baffles prevent feed waste.

The pan can be easily washed, and it swings down for drying.

Easy access all around the pan discourages birds from entering the pan and soiling the feed. Even if poults do enter the pan, they can exit safely because there is no conventional grille.

Big Dutchman.

Multiple minimum feed settings allow you to set the pan for your particular feed. The patented drop feed spreader disperses feed evenly 360°.

Fine and course feed is evenly distributed throughout the pan, ensuring proper nutrition and preventing wasted build-up.

The durable snap-on top cap is easy to install or remove.

The unique three-strut grille allows even the smallest poults to access feed easily, for a better start.

Raising the feed collar to the top allows the pan to flood, providing excellent starts for poults. Feed flows out in a complete 360° circumference, eliminating competition for feed and the 'valleys' that can trap birds.

Lowering the collar reduces feed flow and helps keep feed in the pan as birds grow. Variable adjustment capability allows for optimum feed levels throughout the growth cycle.

The feed collar is lowered to a preset height for the appropriate feed level. Adjustment of the pan's drop allows for eight different minimum feed level settings. The feed level setting is determined according to your birds and feed; it's set during installation and can be changed if needed.

The unique shut-off feature allows any individual pan to be easily shut off, by hand, anywhere along the line.

The Unigrow360 system— exceptional equipment, dependable performance

Feeder and
hopper unit

Auger
and tube

Direct-drive
unit

The Unigrow360 pan is a patented revolution in poult feeding. Here's the rest of the superior Unigrow360 system:

Hopper and feed delivery

- Up to 1,200 lbs. (540 kg) of feed is delivered per hour.
- Permanently sealed bearings provide long life.
- Removable extension allows the unit to be raised to the ceiling for house cleanout.
- Hopper wall design allows steady flow of all types of feed to the auger and faster filling of all pans.

Auger and tube

- Heavy-gauge construction of the tube prevents twisting and feed entrapment.
- Tempered steel auger with smooth flighting ensures long tube life and energy efficiency.
- Feed drop-out holes handle most types of feed with no separation of ingredients.

Big Dutchman drive units

- Reliable, energy-efficient drive units are available in your choice of direct-drive or belt-drive models.
- Drive units feature a low-profile design that allows them to be

winned higher during house cleanout.

- A reliable control pan ensures that all pans remain full of feed.

Put it all together, and you have the best turkey poult feeding system on the market.

The Big Dutchman Unigrow360 Starter Feeder for Turkeys delivers dependability, maximum feed efficiency, and optimal growth during the critical starting period of brooding and growing. All of this is accomplished while saving you more valuable time and labor than any other feeding system.
