Free Access Stalls

Modern group housing of pregnant sows

FREE ACCESS STALLS

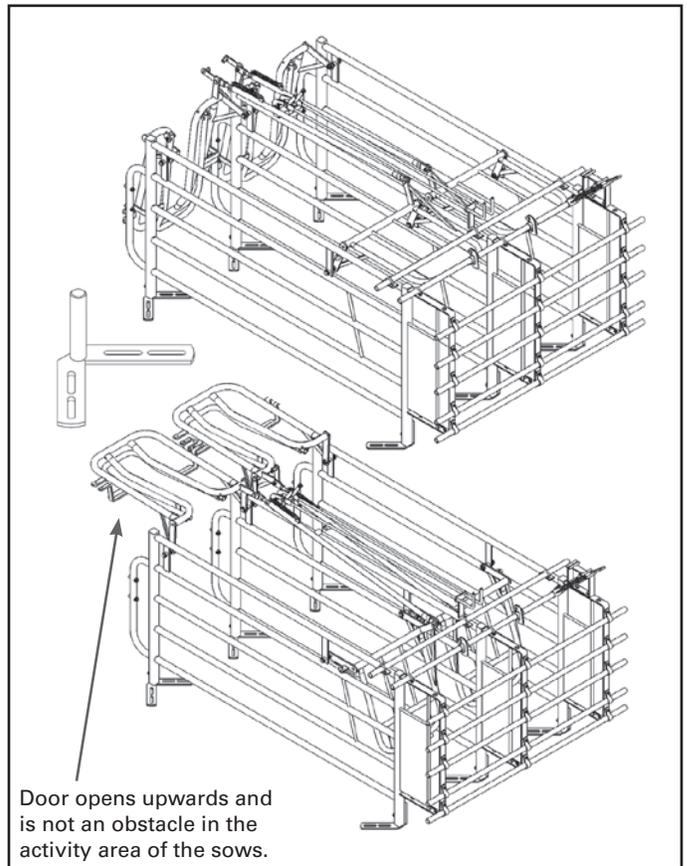

- Future group housing system for pregnant sows -

This type of housing allows the sows to move freely in the group. Feeding takes place in stalls. Every sow has her own feeding place and will not be disturbed during feed intake. The free access crate closes automatically

when the sow enters the stall and is opened by the sow when she wants to leave. Feed can be supplied either by dry or liquid systems.

Advantages

- All sows have a separate feeding area where they can eat without being disturbed. There is no aggression during feeding
- No additional training required
- Excellent monitoring of every sow, the stalls can be locked separately, from front or back of stall, or in groups
- Stalls are easily accessible for the operator due to walkthrough rear door, for easy pregnancy check and access
- Can be used in both gestation and breeding areas; stalls are made of 1" hot-dip galvanized steel tubing providing a very heavy-duty construction
- Stalls are equipped with solid 1.1" diameter hot-dip galvanized feet for long service life
- Dimensions: 7.55 ft long and 2.04 ft wide
- Adjustable spring tension operation for easy sow entry/exit
- Rubber bump absorbers for quiet operation
- Rear door can only be unlocked from exiting sow
- Bolt together front head to head systems available
