DuoChain

Space-saving hen and rooster feeding system

DuoChain – space-saving breeder feeding

The DuoChain breeder feeding system for hens and roosters consists of an entire chain loop in one trough. The feeding system has two different applications: one for space-saving rooster feeding and the other for additional feed lines for hens. Special grills designed for either males or females are utilized

depending on which application is needed.

The design of the corners and trough create a space-saving feeding system that comes as one complete feed line. Our Challenger feed chain conveys the feed, and the DuoChain system has flexible

mounting options, i.e. in standing position or suspended from the ceiling.

DuoChain is a “dynamic duo” system that is simple, efficient and durable. It is also easy to install and maintain.

Chains run in both directions for fast and space-saving feed distribution

IMPORTANT ADVANTAGES:

- Space-saving, flexible chain feeding system for feeding roosters or hens
- The chain feeding loop is inside a single, straight line trough with a center divider
- Chain transports feed coming from the hopper in two directions, reducing stress
- Standing or suspended installation
- Height can be adjusted
- Feed is distributed quickly throughout the entire house
- Chain promotes natural smoothing of the beak
- Birds can be inspected while they eat
- Well-suited for any house length since the hopper can be installed at the beginning or middle of the feed line
- Ideal cleaning conditions due to the open trough and no hidden corners
- Maximum length 500'
